SOBUR BAKARE

Electrical Power Systems | Substation Automation | Industrial IoT
Lagos, Nigeria | bakaresobur@gmail.com | Portfolio | Linkedin

PROFESSIONAL PROFILE

Electrical and Electronics Engineering professional with six years of experience across electricity distribution, substation operations, industrial electrical maintenance and embedded systems. Operates HV/MV substation IEDs, breakers, and Isolators. Built a working IEC 61850-to-MQTT gateway prototype and a simulated relay environment. Seeking opportunities in power system automation, grid monitoring and cyber-physical energy systems.

RELEVANT EXPERIENCE

Founder & Lead System Architect, DIMSYS Technologies, Lagos — June 2026 – present

- Architected an edge-based electricity distribution intelligence platform integrating protection-relay data acquisition, telemetry streaming and operational monitoring.
- Built a working gateway prototype that polls relay measurements, subscribes to IEC 61850 Buffered Report Control Block (BRCB) events and streams telemetry over MQTT, with local classification of four outage events and a durable offline cache.
- Developed an IEC 61850 MMS server simulator (up to three relays, on-demand fault injection) to test acquisition, reporting and recovery workflows without physical relay hardware.
- Leveraged agentic workflows to engineer the system in a fraction of the time.

Distribution Substation Operator, Ikeja Electric Plc., Lagos — January 2023 – present

- Operate and monitor HV/MV substation assets including vacuum and SF_6 circuit breakers, numerical protection relays, isolators, and transformers.
- Monitor feeder conditions, translate protection events, investigate faults, report outages, and coordinate restoration.
- Prepare feeder loading and outage reports; execute permit-to-work, lockout/tagout and station-safety procedures.
- Support commissioning: trip testing, secondary-injection testing, CT polarity verification, breaker timing and interlock checks.

Field Services Engineer, Dyna Electrical Services Ltd., Osun State, Nigeria — April 2021 – December 2022

- Serviced industrial power distribution transformers, breakers, and other supporting assets.
- Troubleshot electrical faults and restored several electrical systems to normalcy.
- Configured auxiliary and supporting systems such as DC rectifiers and BMS.

R&D PROJECTS

Electric Substation Edge Gateway — 2026 – present

- IEC 61850 to MQTT edge gateway prototype with local outage classifier (Feeder Restored, Unplanned, Planned, Upstream) with fault typing, bounded durable offline cache, watchdog and hardened service; covered by automated tests and live run against IEC 61850 MMS sever (relay simulator).

Tech: .NET 8, IEC 61850 (MMS, BRCB), MQTT, TLS, Docker, systemd

IEC 61850 MMS Server Simulation — 2026 – present

- MMS server for up to three relays with interactive commands for planned, unplanned and upstream outages, used to validate the substation edge gateway end to end.

Tech: C, IEC 61850, Docker

Gateway Configuration Builder — 2026 – present

- Converts ICD/CID/SCD files into gateway configuration across relay vendors.

SKILLS

Power Systems: HV/MV substation management, transformers inspection, numerical relay, circuit breaker, Isolator operation, feeder monitoring, fault investigation, equipment testing & commissioning, permit-to-work and LOTO
Industrial IoT & Software: IEC 61850, Modbus TCP, Relay data acquisition, C#, .NET, Docker, Git and GitHub
Embedded & Hardware: ESP32, Raspberry Pi, microcontroller firmware, and electronic hardware design

EDUCATION

Federal Polytechnic Ede, Osun State, Nigeria — 2014 – 2019
Electrical/Electronics Engineering Technology (Power and Machines).
