SOBUR BAKARE

Electrical Power Systems | Substation Automation | Industrial IoT
Lagos, Nigeria | bakaresobur@gmail.com | Portfolio | Linkedin

PROFESSIONAL PROFILE

Electrical and Electronics Engineering professional with five years of experience across electricity distribution, substation engineering and operations, industrial electrical maintenance and embedded systems. Operates HV/MV substation, Intelligent electronics devices, breakers, and Isolators. Architected and built a working IEC 61850-to-MQTT gateway prototype tested end-to-end with simulated relay environment I developed. Seeking opportunities in power system automation, grid technology and cyber-physical energy systems.

RELEVANT EXPERIENCE

Distribution Substation Operator, Ikeja Electric Plc., Lagos June 2023 – present

- Supervise and coordinate electrical installation and maintenance project in safety sensitive environment.
- Operate HV/MV substation assets including circuit breakers, numerical protection relays, and isolators.
- Monitor feeder conditions, translate protection events, investigate faults, and coordinate restoration.
- Prepare feeder loading and reports; execute permit-to-work, lockout/tagout and station-safety procedures.
- Support commissioning: trip testing, secondary-injection testing, polarity verification, and interlock checks.

Field Services Engineer, Dyna Electrical Services Ltd., Osun State, Nigeria April 2021 – December 2022

- Modeled HV & MV substations to simulates symmetrical and asymmetrical fault currents analysis with ETAP.
- Designed HV & MV substation Single-Line Diagrams and supported configuration and installation of new substations apparatus including transformers, breakers, and relays.
- Carried out pre-commissioning activities: trip test, panel wiring and blueprint verifications, polarity verification, breaker timing and interlock checks.
- Serviced industrial power distribution transformers, breakers and other supporting assets.
- Troubleshot electrical faults and restored several electrical systems to normalcy.
- Configured auxiliary and supporting systems such as DC rectifiers and BMS.

APPLIED ENGINEERING R&D

Substation Edge Gateway (IEC 61850 to MQTT) 2026 – present

- Researched and architected an IEC 61850 to MQTT substation edge gateway prototype with local outage classifier (Feeder Restoration, Unplanned, Planned, Upstream) with fault typing, bounded durable offline cache, watchdog and hardened service; covered by automated tests and live run against IEC 61850 MMS sever (relay simulator).

Tech: C#, .NET 8, IEC 61850 (MMS, BRCB), MQTT, TLS, Docker, systemd

IEC 61850 MMS Server Simulation 2026 – present

- MMS server for up to three relays with an interactive console/button for planned, unplanned and upstream outages, used to validate the substation edge gateway end to end.

Tech: C, IEC 61850, Docker

Gateway Configuration Builder 2026 – present

- Converts ICD/CID/SCD files into gateway configuration across relay vendors.

SKILLS

Power Systems: IEC 61850, Substation Automation, Substation edge data acquisition, HV/MV SLD designs & simulation, breaker & Isolator operation, fault investigation, equipment commissioning, permit-to-work & LOTO

Industrial IoT & Software: ETAP, SCL, C#, .NET, Docker, Git and GitHub

Embedded & Hardware: ESP32, Raspberry Pi, electronic hardware design

EDUCATION

Federal Polytechnic Ede, Osun State, Nigeria 2014 – 2019
Electrical/Electronics Engineering Technology, (Power & Machine).
Grade: Upper Credit

World Education Services (WES) course-by-course evaluation: reported as comparable to a U.S. bachelor's degree.
GPA 3.60/4.00
